01 / DOCUMENTATION

Overview & document guide

Purpose, scope and evidence for the delivered foundation.

Executive summary

The YSSE Main Portal brings organization information, nine departments, sample learning resources, announcements and virtual internship recruitment into one responsive website. The initial deliverable demonstrates the complete applicant-to-onboarding workflow, supported by persistent data, role checks and staff tools.

The public demonstration is hosted on Vercel. Local development uses SQLite; hosted recruitment uses Neon PostgreSQL. This document describes the code that exists today and maps it to the broader research proposal supplied for documentation.

9	2	15 + 2
Department profiles	Signed-in roles	Passing API + browser tests

Who this document serves

Project leads: delivery status, requirement gaps and next decisions. **Developers:** architecture, API, setup and verification. **HR and content staff:** recruitment steps, batch settings and publishing boundaries.

Reading guide

Pages	Topic
3	Requirement traceability and scope alignment
4–5	Public experience, departments and learning
6–7	Applicant workflow and staff operations
8–10	Architecture, data/API and security
11–12	Setup, hosting and verification
13–14	Roadmap, measures, references and handover

> **Delivery boundary**
>
> This is a functional demonstration with sample accounts and content. It is not an approved recruitment campaign or a finished learning management system. Real applicant data must wait for the identity, permissions and operational work listed on page 13.

02 / DOCUMENTATION

Requirements & scope alignment

Research proposals are separated from verified implementation.

The reference is the *YSSE Main Portal Research & Feasibility Report*, dated 23 October 2026, Wing 05 Team A. Its recommended scope extends beyond the original functional-demo brief. The following matrix records the current position; it does not mark the whole research proposal as complete.

Requirement / proposal	Current state	Evidence / remaining work
Home, organization and departments	Implemented	Responsive public pages; department search; nine profile pages. Real member directory remains pending.
Internship opportunity and intake	Implemented for demo	Configurable single batch; draft, submit, review, interview, decision, acceptance and onboarding.
Dynamic notices / events	Partial	Staff can add/remove announcements shown publicly. No dedicated event calendar or expiry workflow.
Courses / Academy / enrollment	Partial	Three sample courses, lesson navigation, filters and worksheets. No enrollment, recording access or Academy integration.
Administrative dashboard / CMS	Partial	Recruitment, batch settings and announcements. Public profile/course copy remains code-managed.
Automated transactional notifications	Not integrated	In-app previews are stored. No actual email delivery, email verification or recovery.
Annual reports / verified impact	Not implemented	Homepage links to sourced department count and founding year; no impact reporting dashboard.
Partner engagement	Partial discovery only	Business Development profile and official contact channels; no partnership inquiry system.
Security and access control	Demo foundation	Server roles/ownership, cookies, validation and headers; finer permissions and production identity pending.
Payments, live chat, certificate engine	Outside current delivery	No payment gateway or chat. Existing external certificate verification is linked.

Technology decision

The research report proposes React/Tailwind, Node/Express and PostgreSQL/Supabase. The actual demo uses modular vanilla JavaScript/CSS, Node's HTTP server and SQLite/PostgreSQL with `pg`. Vercel and Neon are the implemented hosting/storage combination. No React, Express or Supabase implementation is claimed.

03 / DOCUMENTATION

Public portal experience

A clear route from discovery to learning and participation.

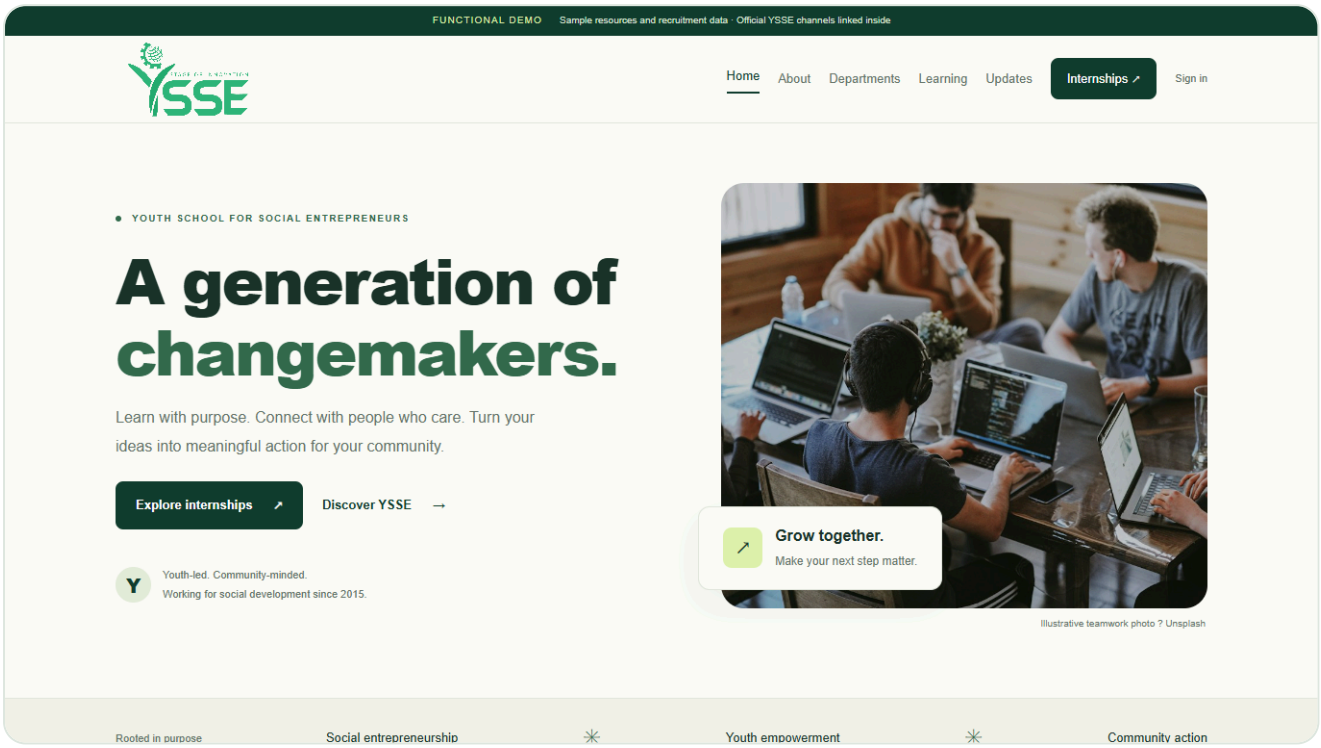

Figure 1. Current homepage captured from the local code baseline on 27 October 2026. Teamwork photography is illustrative.

Page / hash route	Primary use
Home · `#/`	Introduction, growth image, featured departments, clickable insights, learning and announcements.
About · `#/about`	Mission summary, learning/community themes and published source links.
Departments · `#/departments`	Search by name or skills and open an individual department.
Learning · `#/courses`	Search/filter sample resources, read lessons and download worksheets.
Updates · `#/updates`	Sample updates, staff-published announcements and official social links.
Internship · `#/internship`	Batch details, eligibility, deadline, available departments and application entry.
Contact · `#/contact`	Official website/social links, recruitment email and certificate lookup.

Interaction and accessibility foundation

Shared navigation, mobile menu, a keyboard skip link, labelled forms, visible focus feedback and descriptive image alternatives support navigation. “Explore all 9 departments” uses a pointer cursor with hover and keyboard-focus treatment. These measures are implemented; a formal WCAG conformance audit is still required.

04 / DOCUMENTATION

Departments & learning resources

Official department names with clearly identified sample detail.

Nine department profiles

Department	Proposed focus
Admin and HR	Recruitment coordination, member support and evaluation
Business Development	Research, partnerships and strategic planning
Communication	Community communication and stakeholder coordination
Content Writing	Editorial writing, research and storytelling
Graphic Design	Campaign visuals, brand consistency and digital design
Marketing and PR	Campaign planning, public relations and social media
Operations Management	Project coordination, event delivery and processes
Video Editing	Video production, editing and motion storytelling
IT	Web development, technical support and digital systems

Each department has its own original SVG emblem on cards and detail pages. Names are based on the official department directory. Responsibilities, descriptions and the leadership → department head → coordinator/mentor → team-member hierarchy are proposed content, not an approved staff directory.

Learning experience

The learning area offers three original sample courses: *Start with social entrepreneurship*, *Communicate with confidence* and *From idea to action*. Visitors can filter by category and department, search, move between lessons and download a text worksheet.

Content ownership and next inputs

Public course and department content is maintained in `public/js/data.js`. Approved names, team photos, reporting relationships, responsibilities, syllabi, instructors, recordings and resource access rules must be supplied by their YSSE owners before publication as official content.

> **Brand and media provenance**
>
> The shared YSSE logo comes from the official certificate portal. Department emblems are custom navigation artwork. The two homepage Unsplash images depict illustrative teamwork and learning; they are not identified as YSSE events or members.

05 / DOCUMENTATION

Virtual internship workflow

From a saved draft to accepted offer and onboarding.

Account & department choice

↓

Draft → Review → Submitted

↓

Shortlisted → Interview scheduled → Interviewed

↓

Selected → Offer accepted → Onboarded

Applicant walkthrough

1. Review the current batch, deadline, eligibility and recruiting departments on Internship.
2. Sign in or create a sample account while demo mode is enabled. Open the application form and choose one department.
3. Enter name, phone, institution, education, skills and motivation. Provide an HTTPS portfolio or a PDF CV of at most 2 MB.
4. Save a draft if needed. Confirm eligibility, weekly commitment and sample-data consent. Review the details before submitting.
5. Use the dashboard to see the reference, status history, interview information and notification previews. Refresh after staff actions.
6. When selected, accept the sample offer. Staff can then mark onboarding complete.

Workflow rules

- One application per account per batch; submitted details are locked.
- Closed or expired batches reject draft saves and submissions.
- Drafts are private to their owner. Staff cannot inspect them.
- Waitlisting, rejection and withdrawal are supported. Waitlisting cannot bypass the required interview before selection.
- Only the applicant accepts the offer. Staff cannot onboard before acceptance.
- Each status change records an actor, time and applicant-safe message atomically.

> **Dates and communication**
>
> Display times use Asia/Dhaka. Date/time form inputs follow the device timezone and convert to UTC for storage. Interview links are recorded, but no calendar invitation or real email is sent.

06 / DOCUMENTATION

Staff workspace & content operations

Operational instructions for demonstration reviewers.

Review an application

1. Use a separate browser profile/private window from the applicant. Sign in as staff and open `#/staff`.
2. Filter by department, stage or text. Open a submitted application, inspect its details and download its CV if supplied.
3. Save a score and private evaluation notes. Applicant API responses exclude these internal fields.
4. Shortlist the applicant, then enter a future interview time, interviewer name and HTTPS meeting URL.
5. Mark the interview complete and record the next valid decision. After applicant offer acceptance, complete onboarding.

Batch settings

At `#/settings`, staff can change eligibility, duration, weekly hours, deadline, recruiting departments and whether applications are open. This configures the existing batch; creating and administering multiple historical batches is future work.

Announcements

At `#/content`, provide a title, summary and portal/HTTPS link. Added notices appear on Home and Updates. Staff may remove a notice. Course editing, event scheduling, expiry and publishing approval are not included.

Reporting

The staff workspace exports the currently filtered application list as CSV. Exported fields are protected against formula-prefix interpretation. Exports can contain applicant information, so real-data access and retention rules must be approved before operational use.

Sample access for local evaluation

Role	Email
Applicant	`applicant@demo.ysse.test`
Staff	`staff@demo.ysse.test`

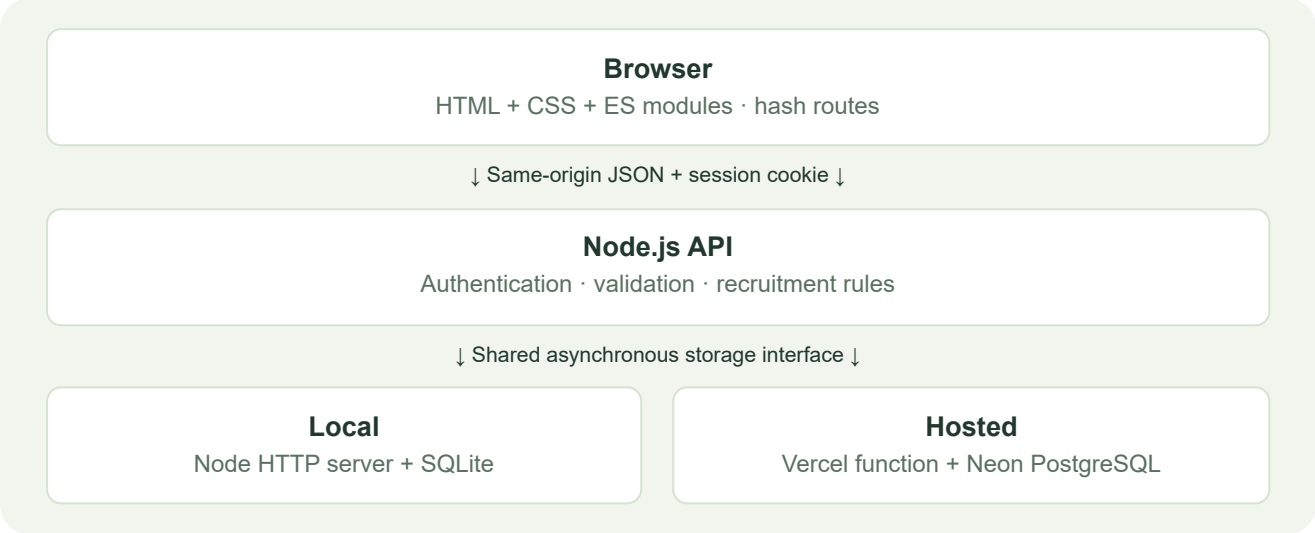

Both seeded demonstration accounts use `YsseDemo2026!`. These are public sample credentials, not production access. The shared staff account can see all submitted sample applications. Use fabricated information and a sample CV.

> **Permission limitation**
> The current server distinguishes applicant and staff, with ownership enforcement. Department-restricted reviewers, separate final approvers, staff invitations and approved reviewer assignments remain pending.

07 / DOCUMENTATION

System architecture

A modular frontend and shared API across local and hosted runtimes.

Module	Responsibility
`public/js/app.js`	Hash routing, shared shell, session-aware navigation and event binding
`public/js/pages/public.js`	Public organization, department, course and update views
`public/js/pages/recruitment.js`	Sign-in/register, application and applicant dashboard
`public/js/pages/staff.js`	Review tools, batch settings, publishing and CSV
`public/js/api.js` / `ui.js`	JSON requests, session state, HTML escaping and UI feedback
`server/api.js`	API dispatch, sessions, request protection and role checks
`server/recruitment.js`	Application validation, serialization and permitted transitions
`server/database.js` / `storage.js`	Schema, seed data, queries, transactions and database adapters
`api/index.js` / `vercel.json`	Hosted API adapter, rewrites, security headers and build configuration

Static assets live under `public/`. Google Fonts has system fallbacks; photos and SVG artwork are served locally. The frontend has no bundler. The runtime dependency is `pg`; Playwright and Prettier are development tools. The lockfile records exact dependency versions.

08 / DOCUMENTATION

Data model & API map

The main integration points and persistence guarantees.

Entity / relationship	Stored responsibility
`users` → sessions, applications, notifications	Identity, email, password hash and applicant/staff role
`sessions` → user	Hashed session token and expiry
`settings`	JSON settings for the current batch and announcements
`applications` → user	Batch, department, stage, form payload, CV bytes/name and timestamps
`history` → application	Ordered status changes, actor, message and creation time
`reviews` → application	One review row with private notes, score and interview details
`notifications` → user	Stored subject/body previews; no outgoing delivery queue

A unique `(user_id, batch_id)` constraint prevents duplicate applications. Transitions and related history/notifications run in a transaction. Status compare-and-swap checks reject competing stale transitions. CV bytes are omitted from application JSON and downloaded through an authorized route.

Method / API route	Access and purpose
`GET /api/health, /api/session`	Public health/session discovery
`GET /api/batch, /api/announcements`	Public batch and notice data
`POST /api/login, /api/register, /api/logout`	Session entry/exit; registration depends on demo mode
`GET /api/application` · `PUT /api/application`	Applicant current application; save draft or submit
`GET /api/notifications`	Signed-in user notification previews
`GET /api/applications/:id/cv`	Owner or authorized staff PDF download
`POST /api/applications/:id/accept` or `/withdraw`	Owner applicant action, subject to current stage
`GET /api/staff/applications[/:id]`	Staff list/detail, excluding private drafts
`PUT .../:id/review` · `POST .../:id/transition`	Under /api/staff/applications; staff review/state change
`PUT /api/staff/batch`	Staff batch configuration
`POST /api/staff/announcements` · `DELETE .../:id`	Staff announcement creation/removal

Mutations use JSON and `X-YSSE-Request: portal`; browser origin must match when supplied. Errors return JSON with an error message and appropriate HTTP status. CV download returns PDF bytes.

09 / DOCUMENTATION

Security & operating boundaries

Implemented safeguards and the controls still required.

Area	Implemented safeguard	Practical limit
Passwords and sessions	Salted scrypt passwords; random session tokens stored as hashes; HttpOnly, SameSite=Strict cookies; eight-hour expiry. Secure on Vercel/HTTPS.	No email ownership verification, password recovery or production identity provider.
Authorization	Server-side role and ownership checks, including CV access and offer acceptance. Private review fields withheld from applicants.	All demo staff have organization-wide access; no department-level permission matrix.
Request protection	Custom mutation header, matching-origin checks, JSON object validation and 3 MB body limit.	Requires a production security review and distributed abuse controls.
Sign-in abuse	Per-process sign-in rate limiting.	Not a shared/distributed rate limiter across hosted instances.
Uploads	PDF signature, .pdf filename and maximum 2 MB; controlled downloads.	No malware scanner or full PDF content sanitization. CVs currently reside in database storage.
Rendering and exports	HTML escaping, restrictive CSP, no framing, MIME protection and CSV formula-prefix handling.	No independent penetration test or formal accessibility certification.
Data management	Transactional stage/history updates; durable hosted PostgreSQL; secrets excluded from Git.	Retention, deletion, restore drills, monitoring and incident ownership need approval.

Sample-data rules

Use fictional names/contact details and a sample CV. Shared sample credentials are suitable for walkthroughs only. Do not interpret a sample offer, notification or onboarding state as an official YSSE decision.

Configuration is not a production approval

`DEMO_MODE=false` disables seeded demo-account access and new self-registration. It does not verify previously created accounts, add production permissions or implement recovery. Introduce an approved identity flow and clean production data before using real applicants.

10 / DOCUMENTATION

Setup, deployment & maintenance

Repeatable local startup and the existing hosting arrangement.

Local setup

Install Node.js 24 and clone the repository. Run these commands from the project root:

```
git clone https://github.com/meherabmehu/YSSE_Intern.git
cd YSSE_Intern
npm ci
npm start
```

Open `http://127.0.0.1:3000`. PowerShell users can use `npm.cmd` if script policy blocks `npm.ps1`. Without `DATABASE_URL`, the server creates ignored `data/ysse.sqlite` automatically. `npm run dev` watches backend changes; refresh for frontend edits.

Variable	Use
`PORT` / `HOST`	Defaults: 3000 / 127.0.0.1 for local serving
`DEMO_MODE`	Demo defaults enabled; false disables seed-account access and self-registration
`DATABASE_URL`	Optional locally; required by the Vercel API for hosted PostgreSQL

Hosted runtime

Vercel serves `public/` and routes `/api/*` to a Node.js 24 function. The project is `ysse-portal` under `meherabmehus-projects`, with Neon PostgreSQL for persistent recruitment data. The API returns 503 if required durable storage is unavailable; it does not silently use temporary SQLite.

The GitHub repository is linked to Vercel. Prior delivery also used the authorized CLI to publish and verify production; this document does not certify every future Git-triggered deployment.

```
vercel --scope meherabmehus-projects deploy --prod
```

Maintenance checklist

- Keep credentials in hosting environment settings; never commit real environment files, database files or CVs.
- Run syntax, API, browser and formatting checks before release. Inspect build status and public routes after deployment.
- Check health, session and batch endpoints; verify assets and a safe sample journey when relevant.
- Define backups, restore verification, alerting and rollback ownership before operational recruitment. Local SQLite data has not been migrated to hosted storage.

11 / DOCUMENTATION

Verification & acceptance evidence

Checks rerun against the documented baseline on 27 October 2026.

Check	Result	Coverage
`npm run check`	PASS	JavaScript syntax across project modules
`npm test`	15 passed; 1 skipped	Recruitment lifecycle, persistence, concurrent transitions, permissions, validation, sessions, CVs, announcements and static serving
`npm run test:browser`	2 passed	Public/mobile pages and complete applicant/staff recruitment journey
PostgreSQL integration	Not rerun for this document	Optional environment-gated suite; skipped in default local run
Hosted production verification	Historical evidence only	Prior progress records contain hosted lifecycle/mobile checks; no new live data mutation for this report

Browser coverage

Playwright runs against an isolated in-memory database on port 3100. The Windows run uses Microsoft Edge. It covers public navigation, department search, course filters, lesson switching, worksheet download, mobile overflow/menu, skip link and unknown routes. The recruitment suite covers draft reload, submission, private evaluation, interview, selection, offer acceptance, onboarding, CSV, batch closure and announcement publication.

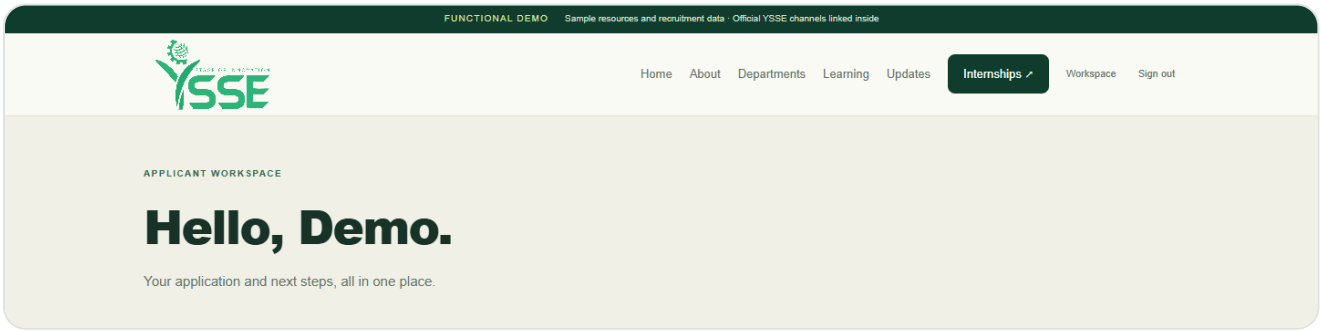

Figure 2. Applicant dashboard after the automated sample recruitment journey. Data is test-generated.

Acceptance still requiring human review

YSSE should review content accuracy, hierarchy and permission assignments; run representative applicant/staff usability sessions; confirm accessibility and performance; and approve production identity, data retention and operational procedures. Passing functional tests alone does not establish production readiness or WCAG compliance.

12 / DOCUMENTATION

Roadmap, risks & success measures

An approval-dependent continuation of the research proposal.

Priority / workstream	Next deliverable	Suggested accountable function
1 · Scope and content approval	Approve MVP boundary, current circular, real department/team data and course ownership.	Project lead, HR and content owners
2 · Identity and privacy	Verified accounts, recovery, staff provisioning, department permissions, consent/retention/deletion rules.	IT and HR; policy owner
3 · Reliable operations	Email delivery, file scanning/storage review, backups/restore tests, monitoring and incident handling.	IT operations / integration owner
4 · Broader portal requirements	Program hub, event lifecycle, Academy enrollment, partnership inquiry and annual/impact reports.	Relevant program/content teams
5 · Quality and release	Formal UAT, accessibility/performance evaluation, activated CI and approved real-data launch.	QA, IT lead and HR sign-off

Risks that influence delivery

Content delay: agree an owner and approval date for each asset. **Scope growth:** prioritize approved MVP features before advanced LMS, chat or payments. **Privacy/abuse:** replace shared access and set reviewer boundaries before real intake. **Service dependency:** verify hosting/storage limits, backups and ownership before launch.

Measures proposed by the reference report

Measure	How to evaluate	Current evidence
Application completion rate	Submitted applications / clearly defined started applications in a reporting period	No behavioral analytics or baseline measured
Publishing turnaround	Elapsed time from approved content submission to public availability	Announcement workflow exists; metric not instrumented
Confirmation-email delivery rate	Delivered confirmations / attempted sends from provider logs	Not applicable until an email provider is integrated
Largest Contentful Paint	Repeatable mobile/desktop performance measurement, with field data where available	No Lighthouse/Core Web Vitals score claimed

The reference report’s eight-week schedule is an indicative planning estimate, not an approved remaining-work deadline. Confirm scope, staffing, dependencies, targets and acceptance gates before assigning dates or budgets. Free-tier hosting does not guarantee zero ongoing cost.

13 / DOCUMENTATION

References & handover register

Sources, ownership inputs and the next review gates.

Primary reference supplied by the requester

YSSE Main Portal — Research & Feasibility Report. NextGen Digital Platform, Wing 05 Team A, dated 23 October 2026. Research contributors credited in the source include Md Abdulla Al Amin Shihab, Hasibul Islam Sourov and Panna Akter. The report provides proposed scope, prioritization, risks, handover guidance and indicative milestones.

View the supplied Main Portal Report on Google Drive

Implementation evidence

Repository baseline: YSSE_Intern · d9f6f95. Descriptions were checked against application modules, server routes/schema and current local test output. Internal supporting files:

File	Handover role
`README.md`	Startup, configuration and developer commands
`docs/DEMO-WALKTHROUGH.md`	Applicant/staff evaluation sequence
`docs/ARCHITECTURE.md`	Modules, persistence and access boundaries
`docs/VERCEL.md`	Hosting, durable database and prior verification
`docs/TASKS.md` / `PROGRESS.md`	Delivery board, milestone history and pending work
`docs/CONTENT-SOURCES.md`	Organization information, logo and photo provenance

Organization and media sources

Published organization/program information: ysseglobal.org, internship program overview, department directory. Logo: official certificate portal, linked logo asset. Illustrative photos: Annie Spratt (teamwork) and heylagostechie (learning) under the Unsplash License. These source entries document provenance; current external-site contents were not independently re-audited for this PDF.

Handover review gates

1. **Lead:** agree scope and mark research items accepted, deferred or excluded.
2. **HR/content owners:** supply approved circular, identity roles, course/team assets and policy text.
3. **IT/QA:** close production controls and activate `docs/ci/portal-checks.yml` as a workflow using an authorized credential; remote CI remains pending.
4. **Release owner:** record UAT approval, restore verification and a production go/no-go decision.
